

**Amendments to the Claims:**

This listing of claims will replace all prior versions, and listings, of claims in the application:

**Listing of Claims:**

Claim 1 (currently amended): A mobile terminal apparatus comprising:

a display portion to be driven by a voltage applied thereto; and

a display portion driving control ~~means for changing unit which changes~~ driving operation of the display portion including at least one of a drive system and a driving frequency thereof, so as to make driving condition of the display portion adapted to operation condition of the apparatus itself.

Claim 2 (currently amended): The mobile terminal apparatus according to claim 1,

wherein the display portion driving control ~~means~~ unit changes the drive system so as to drive the display portion by sequential scanning drive when movie display is performed, and to drive the display portion by interlaced scanning drive when another display is performed.

Claim 3 (currently amended): The mobile terminal apparatus according to claim 1,

wherein the display portion driving control ~~means~~ unit

changes the drive system so as to drive the display portion by sequential scanning drive in a camera mode for operating a camera, and to drive the display portion by interlaced scanning drive in another operation mode.

Claim 4 (currently amended): The mobile terminal apparatus according to claim 3,

wherein the display portion driving control ~~means~~ unit changes the drive system of the display portion into the sequential scanning drive as soon as the camera mode is started, and changes the drive system of the display portion into the interlaced scanning drive as soon as the camera mode is terminated and shifted to another operation mode.

Claim 5 (currently amended): The mobile terminal apparatus according to claim 1,

wherein when the display portion driving control ~~means~~ unit changes the driving operation, the display portion driving control ~~means~~ unit carries out the driving operation change in a period after scanning one screen in the display portion is completed and before scanning a next screen is started.

Claim 6 (currently amended): The mobile terminal apparatus according to claim 1,

wherein when the display portion driving control ~~means~~ unit changes the driving operation, the display portion driving control ~~means~~ unit changes display contents of the display portion in the vicinity of changing the driving operation.

Claim 7 (currently amended): The mobile terminal apparatus according to claim 1,

wherein the display portion driving control ~~means~~ unit changes at least one of the drive system, the driving frequency and the driving voltage of the display portion in accordance with the operation condition of the apparatus itself.

Claim 8 (currently amended): The mobile terminal apparatus according to claim 1,

wherein the display portion driving control ~~means~~ unit changes the drive system of the display portion into interlaced scanning drive or frame inversion drive when the apparatus itself is in a standby state.
